

Third International
'BIOLOGICAL CONGRESS'

23-26 April 2026, Bishkek-Kyrgyzstan

Dear Participants,

Biology is a fundamental branch of science that enables us to understand the basic principles of life, to correctly interpret nature, and to produce scientific solutions to the health, environmental, and sustainability problems facing humanity. With its broad interdisciplinary structure ranging from molecular biology to ecology, biotechnology to environmental biology, biology is at the center of scientific and technological developments today.

In a rapidly changing world, global issues such as the climate crisis, the decline of biodiversity, the emergence of new diseases, and food security have increased the importance of biological sciences more than ever. In this context, sharing current research in the field of biology, strengthening interdisciplinary collaborations, and encouraging young researchers to engage in scientific production are of great importance.

In this context, *the Third International Biology Congress*, to be held in Bishkek between April 23-26, 2026, in cooperation between Kyrgyzstan and Turkey, aims to provide a strong scientific platform for sharing knowledge and experience by bringing together scientists, academics, and researchers from different countries. The congress aims to present original studies conducted in different subfields of biology, discuss current scientific developments, and establish new academic collaborations. We hope that you will honor our congress with your scientific contributions and valuable participation, and we would like to express that we will be very happy to welcome you to Bishkek.
